

## A B S T R A C T

A METHOD AND A SYSTEM FOR CAPTURING A WIDE-FIELD IMAGE  
AND A REGION OF INTEREST THEREOF

5

This system captures an image acquired by a simply  
connected wide-field optical system (1) providing a first  
optical channel, this image being captured by a first  
video camera. A sampling optical system inserted into  
10 this first channel captures on a second video camera a  
narrow field corresponding to a region of interest of the  
wide field.
